

Padlet (Evaluación continua) - Semana 5 Taller 1

Alumno: [Luis Méndez Lázaro](#)

Create a bucket

The screenshot displays the AWS S3 console interface for creating a new bucket. The browser tabs at the top include WhatsApp, Módulos del curso: Análisis y Di..., Presentación de PowerPoint, Learner Lab, and S3 bucket. The address bar shows the URL: s3.console.aws.amazon.com/s3/bucket/create?region=us-east-1.

The console page is titled "Create bucket" and includes a sub-header "Buckets are containers for data stored in S3. [Learn more](#)".

General configuration

Bucket name:

Bucket name must be globally unique and must not contain spaces or uppercase letters. See [rules for bucket naming](#).

AWS Region:

Copy settings from existing bucket - optional
Only the bucket settings in the following configuration are copied.

Object Ownership

Control ownership of objects written to this bucket from other AWS accounts and the use of access control lists (ACLs). Object ownership determines who can specify access to objects.

☐ ACLs disabled (recommended)
All objects in this bucket are owned by this account. Access to this bucket and its objects is specified using...

☒ ACLs enabled
Objects in this bucket can be owned by other AWS accounts. Access to this bucket and its objects can be...

Object Ownership

☒ Bucket owner preferred
If new objects written to this bucket specify the bucket-owner-full-control canned ACL, they are owned by the bucket owner. Otherwise, they are owned by the object writer.

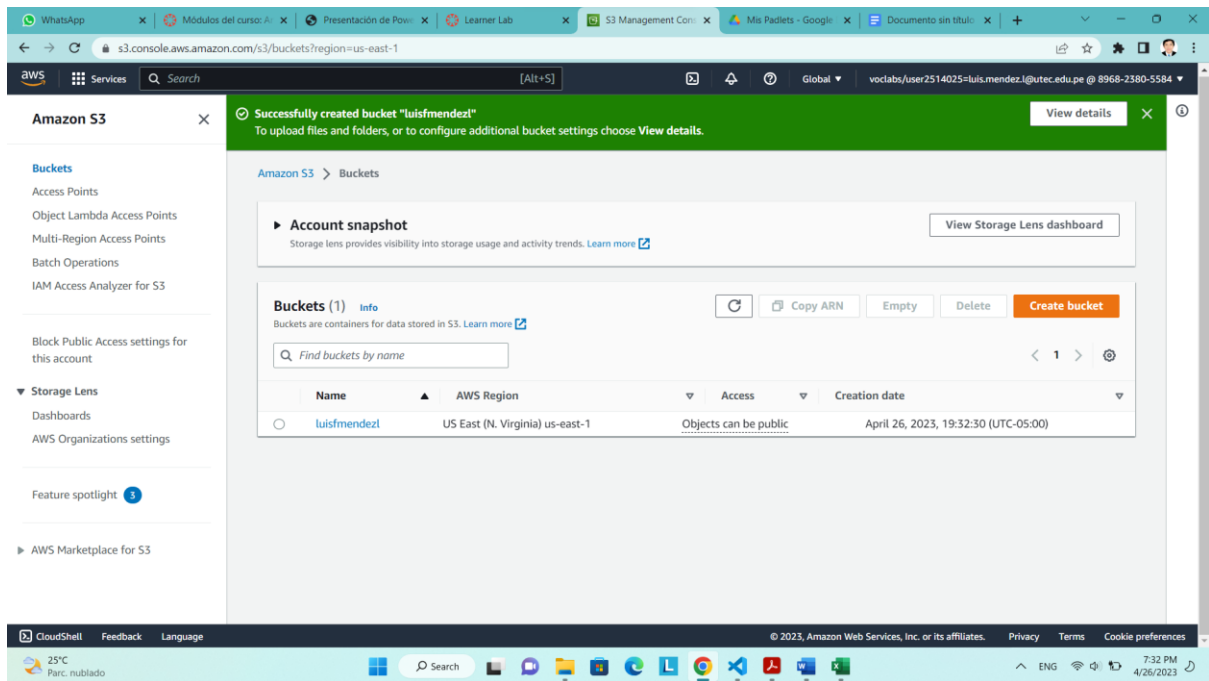

☐ Object writer
The object writer remains the object owner.

Block Public Access settings for this bucket

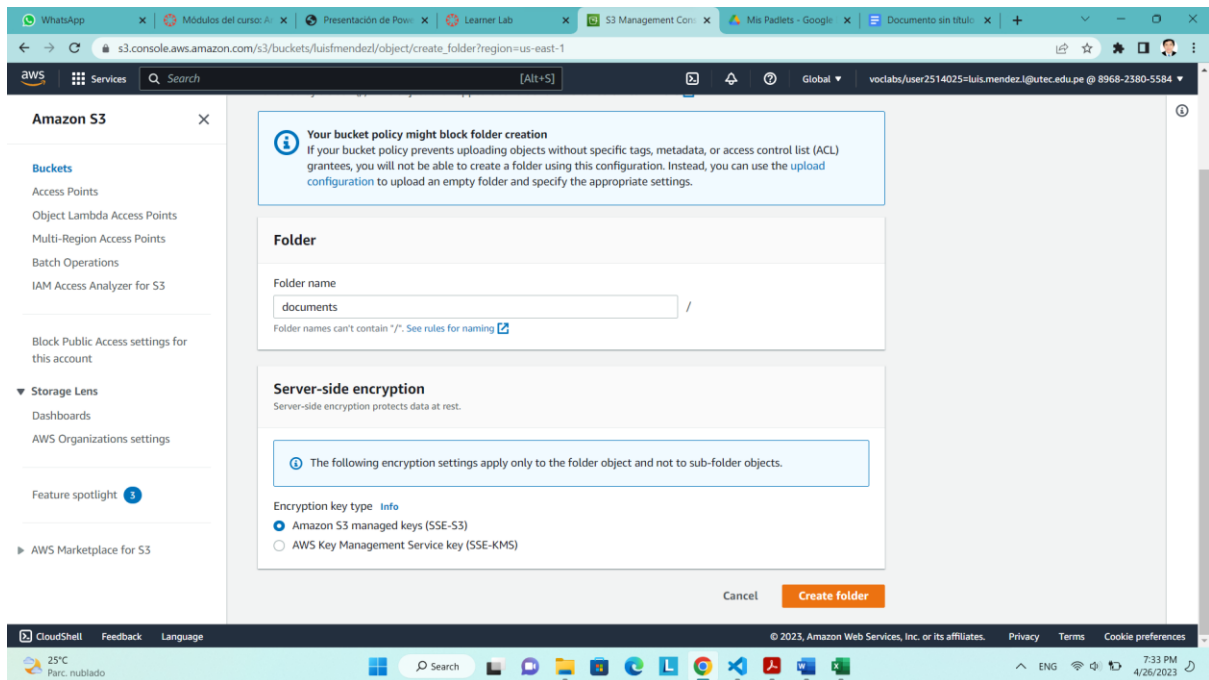

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to this bucket and its objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to this bucket or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

☐ Block all public access
Turning this setting on is the same as turning on all four settings below. Each of the following settings are independent of one another.

☐ Block public access to buckets and objects granted through new access control lists (ACLs)
S3 will block public access permissions applied to newly added buckets or objects, and prevent the creation of new public access...
